

## Shaw's Funeral Products

Struggling to find an extra large adult urn? The funeral industry offers a wonderful array of cremation urns, but most are only suitable for containing capacities of cremated remains up to approximately 3.5 litres (which will hold the ashes of an average-sized adult). Shaw's Funeral Products offers a number of styles which can contain greater capacities of cremains.

Amongst the company's collection of large capacity urns are biodegradable styles made from arboform (a sustainable thermoplastic material which will disintegrate in five to eight years in soil), contemporary designs in aluminium, brass and steel, as well as two designer urns from the signature collection.

Extra large capacity urns are featured on Shaw & Son's website in a dedicated category 'cremation urns (extra large capacity)'. Within this category, a total of 22 extra large capacity urn styles are available from stock for immediate dispatch, while a wider range of urns are available to special order (with a lead time of approximately ten working days).

In addition to the above, Shaw's range of cremation urns includes a large number of standard capacity designs in a wide variety of materials and in styles that range from the traditional to the ultra-modern. Every urn is meticulously checked to ensure it is of the highest quality and blemish-free. The complete range can be found at [www.shawfuneralproducts.co.uk](http://www.shawfuneralproducts.co.uk).

## RWL Products

The Diplomatic TX3 is a durable and versatile machine with a wider footprint. It works in combination with the LEEC scissor lift and with hospital beds, stretchers, mortuary tables and trays.

The TX3 is a powerful, cordless rechargeable tool. Each battery charge lasts for approximately 30 lifts. It allows you to work by yourself with confidence at every stage of the preparation and placement process. The wide nylon strap system lets you lift and place bodies directly into coffins and place coffins safely into hearses without assistance.

The TX3 safely and securely lifts and lowers bodies weighing up to 47 stone at the touch of a button. It reduces the risk of injury from working with larger bodies and helps ensure that HSE General Risk Assessment Guidelines for Lifting and Lowering are met in the workplace.

Lorraine Richardson, mortuary manager, Royal Blackburn Hospital, said: "The TX3 allows us to work easily with bodies of above average weight and means that there are no restrictions to the lifting that one person can do if another staff member is called out. It's very useful from a Health and Safety point of view and I have already recommended it to other people. The TX3 saves time and we use it throughout the preparation and placement process, from the moment an above average weight body arrives in our mortuary to the final placement of the coffin in the hearse."
